

The twenty-first century ushered mankind into adventurous, exciting, but challenging new horizons. The new power of computation led to colossal advances in genetics, space exploration, and quantum physics—just to name a few—while the power of human imagination reached new summits. At the same time, mankind faces threats posed by increased competition over resources, military rivalries, economic imbalance, environmental depletion, demographic growth, terrorism, wars and migration. Therefore, the goal of this series of conferences is to reunite promising and well established scholars in a creative environment, to propose holistic ways of thinking by nurturing the engagement of the global intellectual elite into conversations meant to tackle the new challenges faced by the mankind. It is a conversation which attempts to go beyond the existing paradigms of thinking. The invited participants include university professors, graduate students, researchers, scientists and practitioners from every field of inquiry.
